

### THE 'ASSURANCE' OF BEST IN CLASS PRODUCTIVITY

Now every business, large and small, can afford our proven and robust testing processes, specialized tools and consulting expertise to enhance testing efficiency. Employing a managed testing strategy will significantly decrease both your costs and cycle times.

#### World Class Expertise: DataCede & Maveric

Our extensive understanding of both the business and technical sides of testing affords you the advantage of accelerated results.

Maveric's Managed Test Services (MTS) for Insurance, Financial Services, Life Sciences and Telecommunications is unparalleled. With DataCede's onshore delivery and Maveric's offshore facilities, our expertise spans across 14 countries in North America, Europe, the Middle East and Asia-Pacific. We bring proprietary testing bench tools and procedures that are best in class.

Through our MTS offering, we can take complete accountability for:

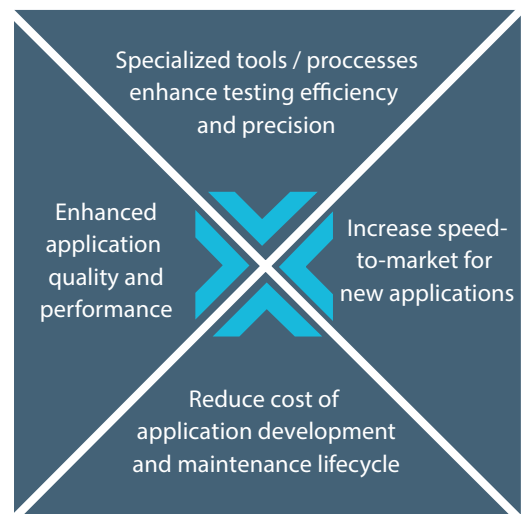

- ▶ End-to-end Test Management
- ▶ Performance Management
- ▶ Test Offshoring
- ▶ Setting up of a Testing Center of Excellence

#### End-to-End Test Management

We bring in required test leadership, processes, tools and talent to meet all functional and non-functional test requirements of our clients.

Our teams work with the IT leadership team to define test strategy, create test plans, lead test execution, reporting and optimization.

We operate as the seamless, extended test team for you— our client. We can, if desired, take full accountability for the complete testing cycle in 'Business As Usual' (BAU).

# Setting up of a Testing CoE

## Performance Management

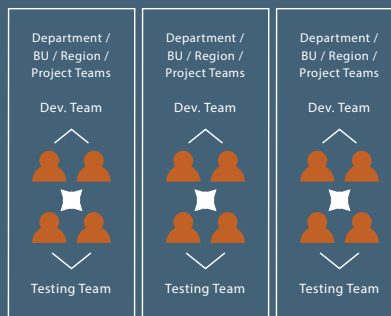

Our Total Performance Management (TPM) follows a comprehensive integrated application monitoring approach. TPM collects all of the required data needed to address a broad array of problems and ultimately improve application performance. TPM helps in optimizing performance levels of the OS, network, application and database layers in a given application environment.

## Test Offshore

Clients derive tangible benefits through our blended offshoring model:

- Rapid mobilization of testing talent
- Higher expandability in ramping projects up and down
- Savings between 50-70% in testing costs
- Strong test design process and workbench - Testac, for optimal coverage

## Decentralized Testing - Drawbacks

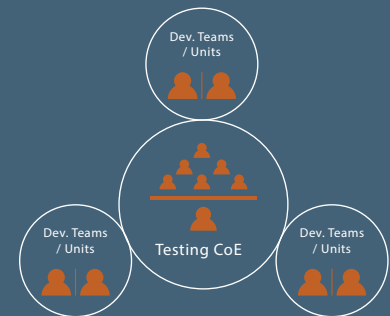

- Distributed testing teams
- Unplanned testing requirements
- Variations in rigor and testing process
- Sub-optimal talent usage
- Tool investments and infrastructure not optimized
- Lesser focus on testing automation

Through our Testing CoE consulting practice, TestRight helps clients:

- Define clear organization level and application level test strategies
- Size up and plan for the right test environments

## Maveric's MTS - Advantages

- Centralized talent pool
- Standardized processes
- Better reuse through central repository
- Quality driven by tight metrics management
- Clear focus on performance and test automation
- Better ROI on testing investment

- Select and adopt the right tool sets for testing across the application landscape
- Implement knowledge management practices - building repositories, training collateral and adopting best practices in testing

## About DataCede

DataCede is a leading provider of software and consulting services to the Insurance, Financial Services, Life Sciences and Telecommunications industries, providing the next-generation of products and solutions.

DataCede enables our customers to compete and succeed in a dynamic marketplace by providing best-of-breed tools and high-quality services with a focus on speed to market, flexibility and cost effectiveness.
