Transformational Assurance

THE 'ASSURANCE' OF GETTING IT RIGHT THE FIRST TIME

Over the course of the last decade, technology has become the key to making the customer experience richer and more connected to the enterprise. This is especially true in the Insurance, Financial Services, Life Sciences and Telecommunications organizations.

Technology solution options are multiplying and their useful life is shorter. As a result, business organizations feel compelled to implement technology-led transformations more frequently. These are essentially change programs that involve the upgrade or replacement of one or more legacy applications or databases.

Transformation programs are increasingly becoming a test of how well various stakeholders in business, technology and partner ecosystems work seamlessly to deploy a good quality solution in the shortest possible time.

Our end-to-end transformation assurance services are designed to support you in meeting your transformation goals and getting it right the first time.

We bring deep domain knowledge, expertise and hands-on risk management experience acquired from years of delivering multiple transformation programs and unique productivity tools.

Our services can be delivered in a number of ways including a hybrid onsite-offshore model.

We have supported a large number of organizations in their transformation programs involving implementation and upgrade of core business systems, CRM systems, payment systems, billing systems and other sub-systems.

Go live with new offerings in the shortest possible time

Deliver exceptional customer experience

Synthesize information for better decision making

DATACEDE®

SIMPLIFYING WHAT MATTERS

Requirements Assurance | Application Assurance | Program Assurance

Requirement Lifecycle Services

Our many years of experience teach us that a majority of quality issues in large transformation programs can be traced back to the requirements definition phase. To address this, our subject-matter specialists:

- ❯ Develop Business Requirement Documents in adequate detail
- ❯ Work with business and IT teams to convert Business Requirement Documents into Functional Specification Documents
- ❯ Carry out requirements validation and testing
- ❯ Carry out ongoing requirements / change management

Program Audit

We employ a structured methodology to carry out quick diagnosis of a program in order to identify potential risks from a quality, cost and time perspective. With hands-on experience in industry-standard solutions, our teams are in a position to identify and assess risks early and also recommend mitigation strategies.
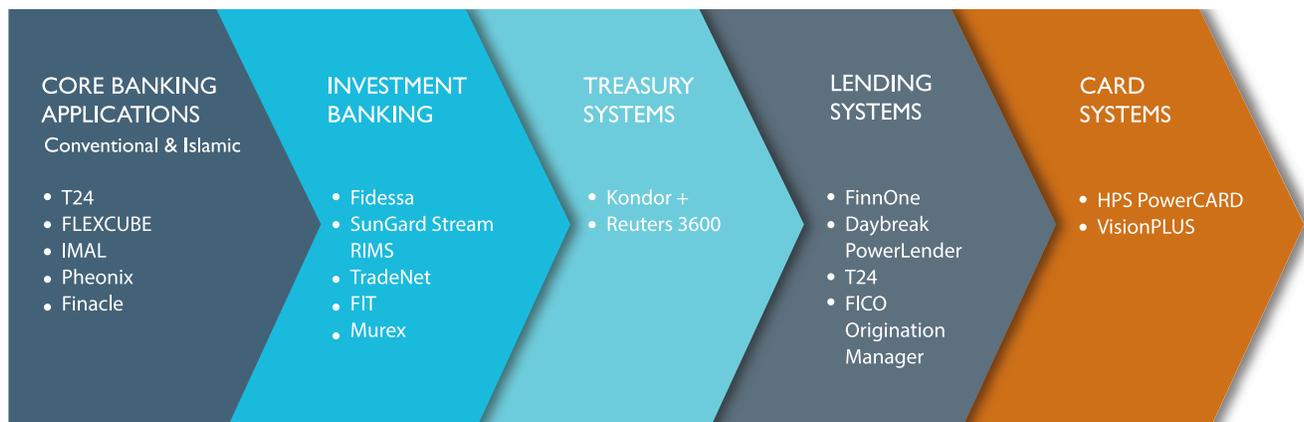

Program Management

DataCede's project and program managers bring a unique combination of domain, product and project management skills to transformation programs. Managing multiple stakeholders and early risk identification are their top two priorities.

Testing of Packaged Applications

Over the last decade we have acquired a wealth of expertise in testing leading packaged applications that Insurance, Financial Services, Life Sciences and Telecommunication companies deploy. Give us a call today to see how easy and valuable transformational assurance methodologies will help your customers and your organization's bottom line.
